RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 68 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: . . . Procedure 2. PROCEDURE 2. Saponify with aqueous alkali as directed below under A. Identify any neutral saponification products (alcohols, phenols, or ketones) as directed under B, below, and any acid saponification products according to C, p. 116. A (Saponification). Fit a 250-cc. round-bottomed flask with a clean, sound cork stopper perforated to receive the lower end of a return-flow condenser that has been mounted vertically on a heavy iron stand. Introduce about 2 grm. of the substance, accurately weighed, into the flask; and then, from a pipette, exactly 50 ce. of an aqueous normal solution of pure sodium hydroxide. Next drop in an ebullator-tube to prevent bumping (cf. p. 223) and boil briskly for about two hours, or even longer if the odor or appearance of the mixture gives indication that, while the substance has been attacked by the treatment, a portion of it remains unchanged. The flask should rest lightly on a square of iron gauze during the boiling, and the burner flame should be shielded from drafts of air; for any pause in the boiling that is more than momentary will cause the ebullator capillary to fill, after which such violent bumping may occur as to shatter the flask. The saponification completed, cool; add two drops of phenolphthalein solution, and titrate with normal sulphuric acid without removing from the flask. The saponification equivalent may now be calculated from the experimental data by substituting in the equation-- $1000X$ no. grm. ester saponified TM no. ee. alkali...
