Brand New Book ***** Print on Demand *****.Cyberspace is defined by the Department of Defense as a global domain consisting of the interdependent networks of information technology infrastructures and resident data, including the Internet, telecommunications networks, computer systems, and embedded processors and controllers. Attacks in cyberspace have seemingly been on the rise in recent years with a variety of participating actors and methods. As the United States has grown more reliant on information technology and networked critical infrastructure components, many questions arise about whether the nation is properly organized to defend its digital strategic assets. Cyberspace integrates the operation of critical infrastructures, as well as commerce, government, and national security. Because cyberspace transcends geographic boundaries, much of it is outside the reach of U.S. control and influence. The Department of Homeland Security is the lead federal agency responsible for securing the nation s non-security related digital assets. The Department of Defense also plays a role in defense of cyberspace. The National Military Strategy for Cyberspace Operations instructs DOD to support the DHS, as the lead federal agency, in national incident response and support to other departments and agencies in critical infrastructure and key resources protection. DOD is responsible for defensive operations on its own information networks as well as the sector-specific agency for the defense of the Defense Industrial Base. Multiple strategy documents and directives guide the conduct of military operations in cyberspace, sometimes referred to as cyberwarfare, as well as the delineation of roles and responsibilities for national cybersecurity. Nonetheless, the overarching defense strategy for securing cyberspace is vague and evolving. This report presents an overview of the threat landscape in cyberspace, including the types of offensive weapons available, the targets they are designed...
